

Project Health Check (PHS) during the project phases.

The picture indicates which Project Health Check could be considered during project development and execution.

A summary regarding the four current Project Health Checks:

1. The PHC Quick Scan is based on the facilitator questions and statements in the PHC tool. The answers of the interviewees will be noted, so no preliminary judgement about the quality of the answers however each answer might trigger a new question.
2. The PHC Project Assurance Scan includes the Quick Scan, and the evidence (if available) must be shown, additional questions are to be expected about the content
3. The PHC Deep Scan includes the Project Assurance Scan and judgement about the delivered documents.
4. A derived Project Health Check regarding Project Control

Please do not hesitate to contact us for more information, a demo, or a Project Health Check. Our e-mail address is info@bpic.nl you can use Arjen.Boelens@bpic.nl or the LinkedIn Messaging option as well. A copy of this LinkedIn post → www.bpic.nl Menu → “Documents”

(*) A Quick Scan is not recommended when the Quick Scan has been executed in the previous phase.

The project phasing picture is based on "Management of engineering projects" edited by Hans L.M. Bakker and Jaap P. de Kleijn (figure 1.2) ISBN 9789081216203
